EmbedUR Linux Training

Module – 4 : Different operators/conditions in Shell scripting

Assessment - 4

Name: Kishore S

Question:

For the attached file, write a bash script which should take the file as input and have to go through it line by line and need to generate an output file (say output.txt) with listings of following parameters fetched from the input file.

Params expected to be fetched from input.txt file : **"frame.time", "wlan.fc.type", "wlan.fc.subtype"**

Sample output expected in output.txt:

"frame.time": "Nov 14, 2024 11:44:48.219200000 India Standard Time",
"wlan.fc.type": "1",
"wlan.fc.subtype": "9"
"frame.time": "Nov 14, 2024 11:44:48.219208000 India Standard Time",
"wlan.fc.type": "0",
"wlan.fc.subtype": "1",

and so on.

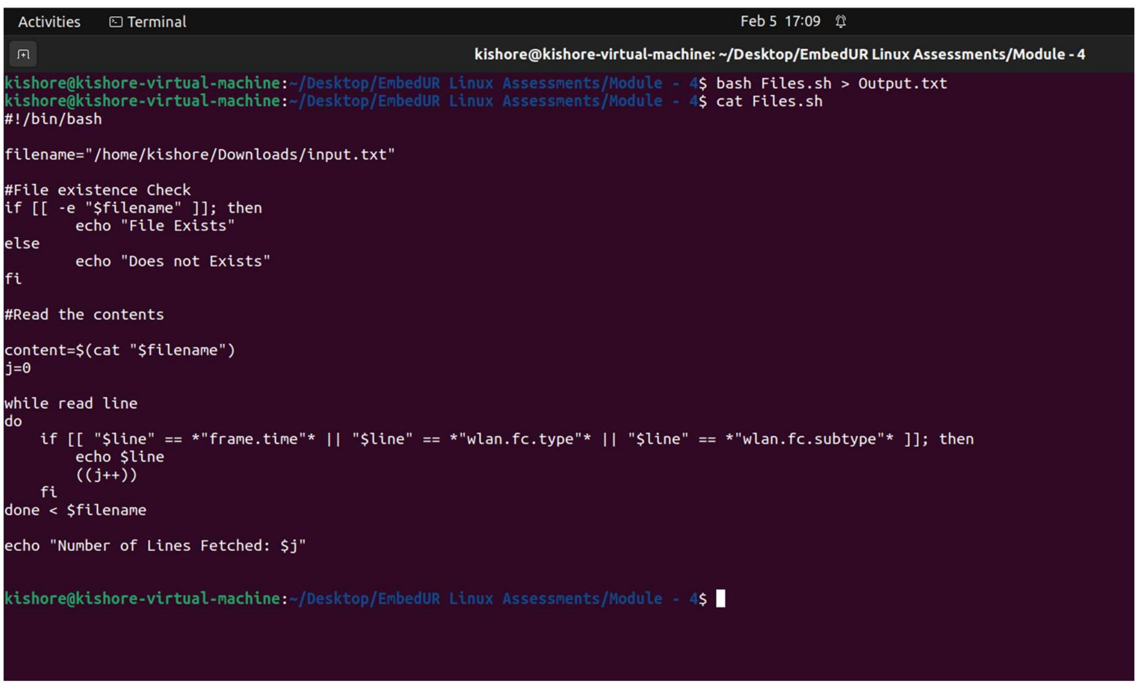
Solution:



```
Activities    Terminal                    Feb 5  17:09
kishore@kishore-virtual-machine: ~/Desktop/EmbedUR Linux Assessments/Module - 4
kishore@kishore-virtual-machine:~/Desktop/EmbedUR Linux Assessments/Module - 4$ bash Files.sh > Output.txt
kishore@kishore-virtual-machine:~/Desktop/EmbedUR Linux Assessments/Module - 4$ cat Files.sh
#!/bin/bash

filename="/home/kishore/Downloads/input.txt"

#File existence Check
if [[ -e "$filename" ]]; then
        echo "File Exists"
else
        echo "Does not Exists"
fi

#Read the contents

content=$(cat "$filename")
j=0

while read line
do
    if [[ "$line" == *"frame.time"* || "$line" == *"wlan.fc.type"* || "$line" == *"wlan.fc.subtype"* ]]; then
        echo $line
        ((j++))
    fi
done < $filename

echo "Number of Lines Fetched: $j"

kishore@kishore-virtual-machine:~/Desktop/EmbedUR Linux Assessments/Module - 4$
```

Activities   Terminal   Feb 5 17:09
